Status: DRAFT

HeritageAuthority(s): SAHRA

Case Type: Development

Development Type: Electrical Infrastructure

ProposalDescription:

Eskom is in the process of expanding their power supply grid by supplying additional substations to areas in need of additional capacity and supplying electricity to areas with increasing electricity demand in the North West and Gauteng Province. The proposed project includes the construction of a new substation in Kashan and a power line of approximately 13 km to the existing Hekpoort Substation. The proposed Kashan Substation falls within the Gauteng Province, north-west of Krugersdorp and it is intended to alleviate the power supply demands experienced by Eskom in the area and to provide electrical infrastructure for future development.

Expanded_Motivation:

At present the area is only supplied by the Hekpoort substation and there is a high demand on the current supply. In the event that the proposed Kashan substation and associated power line is not constructed; the surrounding area's network capacity could be compromised and there could be a decrease in the quality of supply which could hinder future development in these areas.
